

USAGE GUIDELINES

The Retractor is exclusively for use with Ultraspec[®] speculum. Never insert Retractor without an Ultraspec[®] speculum in place.

- 1.** Select an appropriately sized Ultraspec[®] vaginal speculum.
- 2.** Operate speculum as normal, locking open at the optimum position with the smooth-spinning nut. (Minimum 75% from fully open)
- 3.** Should the cervix be obscured during vaginal examination, do not remove the speculum. Gently insert the side-wall Retractor into the rear aperture of the Speculum. (Inserting the Retractor gently displaces the sidewalls laterally)

- 4.** Proceed with procedure with a clear unobstructed view of the cervix area. (Potential damage to the sidewalls from instruments is minimised by the spoon-shaped beaks.)

- 5.** Upon completion of the procedure:
 - a.** Gently withdraw the Retractor by pulling the single tab.
 - b.** Once Retractor is removed, slowly release the speculum using the nut so blades are closed before withdrawing it.
 - c.** Discard used devices in standard clinical waste after single-use.
